

Animofic Subtitler

Installation Guide · Adobe After Effects extension (Mac & Windows)

Thank you for your purchase! Animofic Subtitler installs in a couple of minutes using a free extension installer. Just follow the three steps below.

1 Get the free installer

After Effects extensions are installed with a small free helper app. We recommend **Anastasiy's Extension Manager** — download it from install.anastasiy.com and install it like any normal app.

Prefer something even simpler? You can instead use **ZXP Installer** from zxpinstaller.com. Either tool works — pick one.

2 Install the extension

Inside this download you'll find the file [AnimoficSubtitler.zxp](#).

- Open the installer you just downloaded.
- Drag [AnimoficSubtitler.zxp](#) onto the installer window (or click [Install](#) and select the file).
- If a security prompt appears, approve it. On **Mac**, if the installer won't open, right-click it → [Open](#) once to allow it.
- Wait for the "installed successfully" confirmation.

3 Open it in After Effects

Fully quit and restart After Effects if it was open. Then open the panel from the top menu:

[Window](#) → [Extensions](#) → [Animofic Subtitler](#)

The panel will appear and you can dock it anywhere you like.

4 Activate your license

The first time you open the panel, paste the **license key** from your purchase confirmation email into the activation field and click [Activate](#). That's it — you're ready to create subtitles.

Keep your license key safe. One key activates the extension on your machine; you can deactivate and move it to a new computer from your account portal anytime.

Troubleshooting

The panel doesn't show up under Window > Extensions

Make sure you fully restarted After Effects after installing. Close it completely (not just the project) and reopen.

The panel opens but looks blank or white

Close the panel and reopen it from Window > Extensions, or restart After Effects once more.

The installer is blocked on Mac (“unidentified developer”)

Right-click the installer app and choose Open the first time, then click Open in the dialog. This only needs to be done once.

Install fails with a signature or verification error

Quit After Effects, run it once as administrator (Windows) or relaunch it (Mac), then try installing again.
